

EX-1017 — Petitioner's Annotated Copy of Phillips (EX-1003) Figure 8

"Magnetic field lines are shown at various elevations (805-813) along the vertical path of the sensor 803 ... substantially different in both direction and magnitude depending on the location of the sensor along its path of travel. ... The wellhead 801, horsehead 804, counterweights 814, etc. all create distortions and act at different longitudinal positions during the motion of the sensor." (EX-1003 [0132]) — "[a] dynamic calibration must be performed" ([0129]), observing the magnetometer "at high frequency during operational conditions of one or more strokes" ([0133])
